DEVMOUNTAIN - PHOENIX, AZ   AUG 2017 - NOV 2017
Web Development Bootcamp - www.devmountain.com

PROJECTS

Book Theme
This website theme is a single page site made using HTML, CSS, Bootstrap and a small amount of jquery. I setup the page using a navbar at the top of the page broken up into a Home Section, About, Meet The Authors, and Contact. The initial purpose of this site is to provide information to readers regarding the books, and information on when you can meet the authors.

Sign-Up Theme
This is a single page site with multiple sections within the page. The pages are broken into 4 sections. The Home, Explore, Create, and Share sections. The site was made using HTML, CSS, Bootstrap, and Jquery. The initial purpose of this site is a sign up template page for people who want to know about a service and how to sign up.

Blog Theme
This project was made using HTML, CSS, Bootstrap, Jquery. It is a multi-page theme however the changes on each page almost act like a filter instead completely different content. Each page is just different ways to view each blog.

Multi-Page Theme
This project was a multi paged theme I made using HTML, CSS, Bootstrap, and some Jquery, SASS and a CDN called Ekko Lightbox. The basic premise of the page is a website for a company trying to get consumers to buy their product with different plans and information on each page as well as a way to contact them and reach out.
